

IN THE SPECIFICATION:

Please delete the first full paragraph on page 3, beginning at line 4, and insert in lieu thereof the following paragraph:

Downstream of the receiver 4 a second valve 5 is necessary for the functioning of the assembly. This valve is generally commanded by the feeding of the system. When the cooling system is interrupted it is immediately closed in order to keep the pressure in the receiver 4. In the same way when the system is ~~locked~~ started it opens so that the coolant under pressure can feed the evaporator 7 by the expansion valve 6.
